Introduction

A Computer Engineering student with hands-on experience in NLP, Generative AI, and RAG-based LLM systems. Skilled in building RAG pipelines and AI applications using Python, TensorFlow, FastAPI, and modern GenAI frameworks.

Education

B.Tech., Computer Engineering — **CGPA : 9.36 | 2027**
Usha Mittal Institute of Technology, Mumbai

Senior Secondary (HSC) — **74.33% | 2023**
R P Jr College Of Arts, Science & Commerce

Secondary (CBSE) — **92.40% | 2021**
Rahul International School

Experience

Content Strategist at GDG UMIT — *2025-26*
Collaborating with cross-functional technical teams to design and communicate developer-focused initiatives.

Data Science Intern at Prodigy InfoTech [Certificate] — *July - August 2025*
Performed data preprocessing, EDA, and feature engineering using Python and analytical ML workflows. Generated analytical insights and reporting dashboards to support data-driven decision-making across structured datasets.

Social Media & Graphics Head at SNDT ACM-W — *2024-25*
Led ACM-W SNDT's social media initiatives, boosting engagement by 40% and introducing 100+ students to tech through HoC'24.

Projects

Intervista – Intelligent Adaptive Learning & Performance Modeling System- Ongoing — *February 2026* []
Python, FastAPI, NLP, RAG, LLM APIs, Redis
- Engineered an adaptive LLM-driven recommendation loop, driving a 15% score improvement using real-time interview analytics and contextual learning patterns.
- Built a FastAPI/Redis RAG pipeline, reducing hallucinations by 25% via retrieval-verified responses & skill tracking.

Sales & Product Performance Dashboard — *January 2026* [Tableau]
Tableau, Excel
- Created an interactive dashboard on Rs.12L+ sales data spanning 5+ dimensions and categories.
- Engineered KPI-driven visuals & filters enabling analysis across 10+ metrics and segments.
- Identified top-performing categories, outlet trends, and sales distribution patterns to support data-driven decisions.

Leaf Disease Detection — *October 2025* []
Python, TensorFlow, Streamlit
- Trained a MobileNetV2-based CNN using transfer learning on 14+ disease classes with >95% accuracy.
- Deployed a real-time inference interface with sub-2s latency for scalable model predictions.

US Accidents Data Analysis — *July 2025* []
Python, Pandas, Matplotlib
- Performed EDA on a 7M+ record dataset spanning 40+ features to uncover accident patterns.
- Engineered features and visualizations identifying 5+ high-risk regions and peak time intervals & generated insights supporting data-driven traffic risk exploration.

Skills

AI & ML: Python (Pandas, NumPy), TensorFlow, NLP, Generative AI, RAG, LLM APIs
Visualization: Tableau, Matplotlib, Plotly
Analytics: Excel, SQL, Statistics, EDA using Python Libraries
Programming: Python, SQL, C++, Java
Tools: Jupyter Notebook, Google Colab, GitHub, FastAPI, Redis

Achievements

- Participant, HackFusion Hackathon 2026 by IEEE UMIT & IEEE SPIT; built a travel-planning app.[Certificate].
- Completed Data Analytics Job Simulation with hands-on EDA, forensic tech, and analysis tasks.[Certificate].
